

Problem 1: Range Builder

Name: _____

Function to write: `getNumbersInRange(start, end)`

Write a function `getNumbersInRange(start, end)` that returns an array of every integer from `start` to `end`, inclusive. Use a `for` loop and `.push()` to build the array one number at a time.

- Start an empty array before the loop: `let result = [];`
- Push into it on every pass through the loop
- Return `result` after the loop ends

```
console.log(getNumbersInRange(1, 5)); // [1, 2, 3, 4, 5]
```

Test Cases — fill in the expected output before you run your code

#	Call	Expected Output
1	<code>getNumbersInRange(1, 5)</code>	
2	<code>getNumbersInRange(10, 10)</code>	
3	<code>getNumbersInRange(3, 8)</code>	

HINT

The loop condition should be `i <= end` so the last number is included, not skipped.
