

Problem 3: Countdown

Name: _____

Function to write: `countdown(n)`

Write a function `countdown(n)` that returns an array counting down from `n` to 1 (e.g., `countdown(5)` returns `[5, 4, 3, 2, 1]`). Use a while loop, not a for loop.

- You need a counter variable declared before the loop that decreases each pass
- Use `counter--` or `counter -= 1` inside the loop
- Double check your loop condition — a mistake here causes an infinite loop

```
console.log(countdown(5)); // [5, 4, 3, 2, 1]
```

Test Cases — fill in the expected output before you run your code

#	Call	Expected Output
1	<code>countdown(5)</code>	
2	<code>countdown(1)</code>	
3	<code>countdown(8)</code>	

HINT

If your program freezes when you run it, you likely have an infinite loop — stop it and check that your counter is actually decreasing.
